6. (Canceled)

7. (Canceled)

8. (Canceled)

9. (Currently amended) A method for documenting medical findings of a physical examination, the method comprising:

displaying a first interface including a first graphical representation of anatomical features;

accepting from a user a first selection of an anatomical feature based on the first graphical representation of anatomical features;

displaying a second interface including ~~medical information~~ a second graphical representation of anatomical features and a first set of controls relating to a first plurality of medical conditions in response to accepting the first selection;

accepting from the user a second selection from the ~~medical information~~ second graphical representation of anatomical features; and

~~combining the first and second selections to derive at least one medical finding~~  
displaying a third interface including a second set of controls relating to a second  
plurality of medical conditions.

10. (Currently amended) The method of claim 9, wherein the first graphical representation of anatomical features includes a graphical representation of a plurality of body locations.

11. (Currently amended) The method of claim 10, wherein the first selection comprises a response indicative of one of the plurality of body locations.

13. (Canceled)

14. (Canceled)

15. (Canceled)

16. (Previously Presented) The method of claim 9, wherein the step of displaying the first interface and the step of displaying the second interface take place in different views.

17. (Currently amended) The method of claim 9, ~~wherein the step of displaying the second interface comprising~~ comprises displaying [[a]] the second graphical representation including a portion of the anatomical features with higher detail in response to the first selection by the user, the first selection indicating [[the]] a portion of [[the]] anatomical features associated with the first graphical representation to be displayed, the second graphical representation including the portion of the anatomical features with greater detail.

18. (Currently amended) A device for documenting medical findings of a physical examination, the device comprising:

an electronically readable media for storing instructions;

a processor, associated with the electronically readable media, that executes the instructions; and

the instructions comprising:

instructions for displaying a first interface including a first graphical representation of anatomical features based on the graphical representation of anatomical features;

instructions for accepting from a user a first selection of an anatomical feature based on the first graphical representation of anatomical features;

instructions for displaying a second interface including ~~medical information~~ a second graphical representation of anatomical features and a first set of controls relating to a first plurality of medical conditions in response to accepting the first selection;

instructions for accepting from the user a second selection from the second graphical representation of anatomical features ~~the medical information~~; and

instructions for displaying a third interface including a second set of controls relating to a second plurality of medical conditions combining the first and second selections to derive at least one medical finding.

19. (Currently amended) The device of claim 18, wherein the first graphical representation of anatomical features includes a graphical representation of a plurality of body locations.

20. (Original) The device of 19, wherein the first selection comprises a response indicative of one of the plurality of body locations.

21. (Canceled)

22. (Canceled)

23. (Canceled)

24. (Canceled)

25. (Previously Presented) The device of claim 18, wherein the instructions for displaying the first interface and the instructions for displaying the second interface effect different views.

26. (Currently amended) The device of claim 18, wherein the instructions for displaying the second interface comprising ~~comprise~~ instructions for displaying ~~[[a]] the second graphical representation of a portion of the anatomical features with higher detail in response to the first selection by the user, the first selection indicating [[the]] a portion of the anatomical features associated with the first graphical representation to be displayed, the second graphical representation including the portion of the anatomical features in greater detail.~~

27. (Previously presented) The method of claim 9, wherein the second interface includes a drill down button.

28. (Previously presented) The method of claim 9, wherein the second interface includes a change system button.

29. (Previously presented) The method of claim 28, further comprising displaying a list of systems associated with the first selection in response to a user selection of the change system button.

30. (Previously presented) The method of claim 9, wherein the second interface includes a procedure button.

31. (Previously presented) The method of claim 30, further comprising displaying a list of procedures associated with the first selection in response to a user selection of the procedure button.

32. (Currently amended) A system comprising:

a medical content database including a parent place node and a child place node, the parent place node associated with a first region of an anatomy, the parent place node including a graphical depiction associated with the first region and an indication of a particular location of the graphical depiction associated with the child place node, the child place node associated with a second region of the anatomy enclosed by the first region of the anatomy; and

a medical finding engine, the medical content database accessible to the medical finding engine, the medical finding engine to initiate display of the graphical depiction in an interface associated with the first region and to initiate display of medical information associated with the child place node in response to receiving a selection associated with the particular location of the graphical depiction associated with the child place node.

33. (Canceled)

34. (Previously presented) The system of claim 33, wherein the medical information associated with the child place node includes the second graphical depiction.

35. (Previously presented) The system of claim 33, wherein the child place node includes an indication of a second particular location of the second graphical depiction associated with a second child place node.

36. (Previously presented) The system of claim 32, wherein the child place node includes a list of problems that may be assigned to findings associated with the second region.

37. (Previously presented) The system of claim 32, wherein the child place node includes a list of procedures associated with the second region.

38. (Previously presented) The system of claim 32, wherein the medical findings engine is to determine a medical finding in response to receiving the selection and to receiving a second selection associated with the medical information.

39. (New) The method of claim 9, wherein the first set of controls includes a tri-state control configured to indicate present, not present, or not entered.

40. (New) The method of claim 9, wherein the first set of controls includes an annotation control.

41. (New) The method of claim 9, wherein the second plurality of medical conditions represents a greater level of detail than the first plurality of medical conditions.

42. (New) The method of claim 9, wherein the second interface and the third interface include a list of recent findings.

43. (New) The method of claim 9, wherein displaying the first interface, displaying the second interface, and displaying the third interface are performed on a wireless tablet computer configured for use by a physician.

44. (New) The method of claim 9, further comprising  
accepting from the user a third selection, the third selection including changing one  
control of the first set of controls; and  
combining the first selection and the third selection to derive at least one medical finding.
